

The Eleventh International Conference on CFD in the Minerals and Process Industries is the premier event in CFD for the industry. It attracts professionals and students from industry, universities and research organisations throughout the world.

Full Papers Due 30 June 2015

The conference will cover the application of Computational Fluid Dynamics in the following industries:

- Mineral processing
- Metal production
- Power generation
- Chemicals
- Food
- Oil and gas

Mini-symposia to be run as part of the conference:

- Simulation of Micro-engineering and Bio-engineering
- Modelling of Gas-particle Flows
- CFD, GPUs and Next Generation Computing

Paper presentations are likely to include:

- | | |
|--|--|
| <ul style="list-style-type: none"> • smelting • burners and furnaces • bio-chemical processes • coal combustion • gas cyclones and hydrocyclones • casting • flash smelting • fluidised beds • environmental aspects • gravity thickeners • slurry flows • grinding mills • blast furnaces • heat exchangers | <ul style="list-style-type: none"> • rotary kilns • spray dryers • steelmaking • crystallisation • fuel cells • pumps • stirred tanks and reactors • flotation • water treatment • granular flows • heat transfer • interface dynamics • turbulence modelling • hydrometallurgical applications • and many others |
|--|--|

Proudly
Organised by
